#### **DETAILED ACTION**

Notice of allowability filed 08/24/2004 is withdrawn in view of the newly submitted IDS filed 10/07/2004

Rejections based on the newly cited references are presened below.

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8, 15-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Japanese Publication JP-162580.

With regard to claims 1, 15, 16, Japanese Publication JP-162580 discloses a connector comprising'. an insulator (2) having a contact receiving portion and a retainer receiving portion that communicate with each other;

a condudtive contact (7) inserted into said contact receiving portion from a first direction', and a retainer (6) inserted into said retainer receiving portion from said first direction for preventing said contact from coming off in a direction opposite to said first direction, said retainer comprising a body portion and an elastic piece (9) that is elastically deformable and joined to said body pofion, said body portion having an excessive deformation preventing portion (a longitudinal projection on side wall of 6) for preventing excessive deformation of said elastic piece toward said body podion, said elastic piece having a specific lock portion (10) and projecting from said body portion in a second direction perpendicular to said first direction, said elastic piece is pushed and deformed toward said body portion by an inner wall surface of said retainer receiving portion when said retainer is inserted into said retainer receiving portion, said insulator having a specific lock receiving

Art Unit: 2833

portion (15) for locking said specific lock portion when said retainer is inserted to a predetermined position of said retainer receiving portion.

With regard to claims 3, 17Japanese Publication JP-162580 discloses that said elastic piece (9) extends substantially along said first direction to have an extending end joined to said body podion.

With regard to claims 4, 15, Japanese Publication JP-162580 discloses that said excessive deformation preventing portion is formed in a position that confronts said elastic piece when said retainer is inserted to the predetermined position of saïd retainer receiving portion.

With regard to claims 5, 18, Japanese Publication JP-162580 discloses that said excessive deformation preventing portion is projeded from said body podion toward said elastic piece (9).

With regard to claims 6, 19, Japanese Publication JP-162580 discloses that said retainer (6) is detachably mounted in said insulator.

With regard to claims 7, 20, Japanese Publication JP-162580 discloses that said specific lock portion (10) is projected outward from an outer surface of an intermediate portion of said elastic piece, said specific lock receiving portion (16) being defined by a through hole formed on the inner wall surface of said retainer receiving podion.

With regard to claims 8, 21, Japanese Publication JP-162580 discloses that said specific lock portion (10) is projected in a second direction perpendicular to said first direction, said contact receiving portion and said retainer receiving portion being adjacent to each other in a third direction perpendicular to said first and second directions.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 11-14, 24-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese Publication JP-162580 in view of Japanese Publication 4-36784.

With regard to claim 11, 24, Japanese Publication JP-162580 discloses a secondary lock mechanism (8) connected to said contact (18) and said retainer (6) for indirectly locking said contact with said insulator through said retainer in said first direction.

Japanese Publication JP-162580 do not disclose a primary lock mechanism connected to said insulator and said contact for directly locking said contact with said insulator in said first direction'

Japanese Publication 4-36784 disclose a primary lock mechanism (3, 10) connected to said insulator and said contact for directly locking said contact with said insulator in said first direction'

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to double-lock the contact as taught by Japanese Publication 4-36784, toto dependably fix the contact with the insulator and the retainer.

an engaging hole made in said contact; and

With regard to claims 12, 25, Japanese Publication JP-162580 when modified by Japanese Publication 4-36784 discloses (Japanese Publication 4-36784) a protrusion (the end portion of 3) protruding from said insulator towards said contact receiving podion, said protrusion being inseded in said engaging hole to lock said contact în said first direction.

With regard to claims 13, 26, Japanese Publication JP-162580 when modified by Japanese Publication 4-36784 discloses (Japanese Publication 4-36784) said insulator (A) has a deformable portion (a finger 3) elastically deformable, said protrusion being formed integral with said deformable portion.

With regard to claims 14, 27, Japanese Publication JP-162580 when modified by Japanese Publication 4-36784 discloses (Japanese Publication JP-162580) said retainer has an insert end (8), said contact (7) having a shoulder portion which engages with said însed end in said first direction, said insed end and said shoulder portion being cooperated with to each another to serve as said secondary lock mechanism.

### Allowable Subject Matter

Art Unit: 2833

Claims 9, 10, 22, 23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

No prior art has been found to anticipate or render obvious the presently claimed subject matter.

Specifically, none of the prior art of record discloses the combination of the limitations presented including the a body portion's particular lock porion projected in said third direction, said insulator having a particular lock receiving portion for locking said particular lock portion (claims 9, 22).

Applicant's submission of an information disclosure statement under 37 CFR 1.97(c) with the fee set forth in 37 CFR 1.17(p) on 10/07/2004 prompted the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 609(B)(2)(i). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alexander D. Gilman whose telephone number is 571 272-2004. The examiner can normally be reached on Monday-Friday, 10:30 a.m. - 8:00 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paula A. Bradley can be reached on 571 272-2800 ext. 33. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
